Vol. 9 Issue 2

Innovation in Endodontics

Agile. Fast-cutting.
Intelligent. **Pro**codile

EndoPilot
Endo motor and
apex locator all-in-one

There's good. There's better. Then there's Komet.

A world-wide leader in rotary instruments

EndoPilot

This torque and speed controlled endodontic motor ensures efficient preparation of the root canal while the modern, integrated apex locator determines the exact, real-time file position during treatment.

- Endo motor and apex locator with Reflex Technology
- Real-time apex location and file position via a patented pulse system
- Intuitive touchscreen interface with a wireless rheostat

Optimal preparation
of the most challenging root canals
thanks to a variably-tapered file core

Flexible. Efficient. Innovative.

Procodile

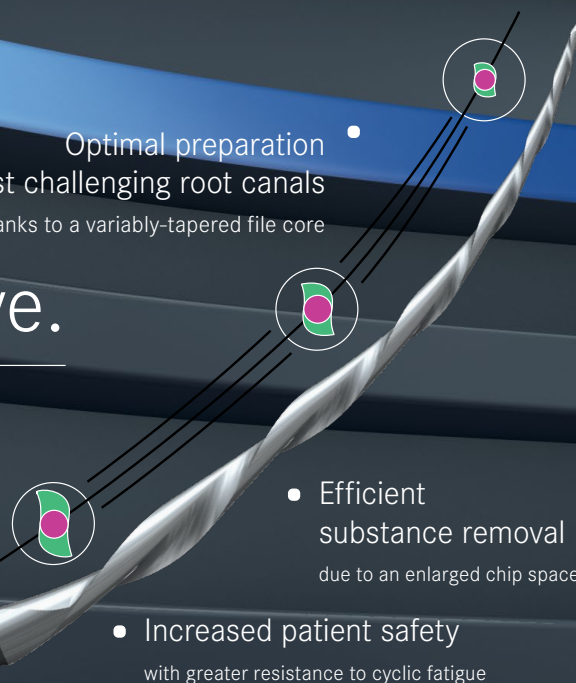

The Procodile is a left-cutting endodontic file system with Reflex Technology, a patented, counter clockwise movement that combines the advantages of rotary and reciprocating motions and can be used in the EndoPilot and all major reciprocating endodontic motors.

Dr. John Olmsted
Endodontist in Greensboro, NC
Past president of the American
Association of Endodontics

“Developed with German technology, the Procodile file is not aggressive but instead extremely efficient, thereby allowing you to provide excellent endodontic care for your patients.”

- Efficient substance removal
due to an enlarged chip space
- Increased patient safety
with greater resistance to cyclic fatigue
- Suitable for use in all established reciprocating endo motors
and with the patented ReFlex® movement in the EndoPilot®

A Complete Solution

F360[®]

Two-File (Shaping + Finishing) full-length NiTi treatment system with Komet's double-S cross-section design

(.04 Taper)

Precision fit, single cone obturation

SkyTaper

Single file NiTi treatment system with Komet's double-S cross-section design

(.06 Taper)

Precision fit, single cone obturation

EndoGuard

The EndoGuard creates the perfect access cavity with optimal efficiency and control

Ideal for expanding and finishing access preparations

Safe, non-cutting tip to protect the pulp chamber floor

Cross-cut flanges eliminates chattering issues of other coronal burs

Designed with a unique double-S cross section

Two contact points with sharp cutting angles
Large chip space for greater debris removal

Cut.Finish.Polish.

ALL-CERAMICS

LD/ZR Chamfer Prep Kit

LD1487A

Used for all-ceramic chamfer preparations. The kit contains instruments specifically crafted for interdental separation, occlusal/palatal preparation, occlusal depth marking, gross reduction, and finishing.

LD/ZR Cut, Finish Polish Kit

LD0707

Used for efficient chairside all-ceramic restorations, including removal, adjusting and polishing.

LD/ZR Prep Kit

LD1316A

Used to complete all-ceramic modified shoulder preparations. This kit features instrumentation tailored to conduct interdental separation, occlusal/palatal preparation, occlusal depth marking, gross reduction and finishing.

LD/ZR Extra Oral Polishing Kit

TD2926

Extra-oral kit of diamond interspersed abrasive instruments for all-ceramic pre-shine and high-shine polishing.

COMPOSITE

Highly Filled Resin Kit

LD0192A

Used to trim, finish and polish small particle composite material. The kit allows clinicians to efficiently refine and smooth composites to a luster-ready surface to create a more esthetic, durable result.

CompoBrite Polishers Kit

TD2948A

This polishing system contains four shapes: flame, cone, spiral, and Komet's flexible footsie. This kit contains two polishing grits for our two-step technique, which allows clinicians to shape, correct, refine, pre-polish, and create a high-shine finish.
