

# Komet USA Launches Endodontic Product Line

## Procodile

The Procodile is a left-cutting endodontic file system that can be used in all major reciprocating endodontic motors, including the WaveOne.

### Advantages:

- Intelligent file design allows up to 44% more flexibility
- Features enlarged chip space for efficient substance removal
- 120% more resistant to cyclic fatigue than WaveOne Gold

## F360<sup>®</sup>

The F360 is an innovative 2-file full-length NiTi treatment system that makes preparing root canals efficient and predictable.

### Advantages:

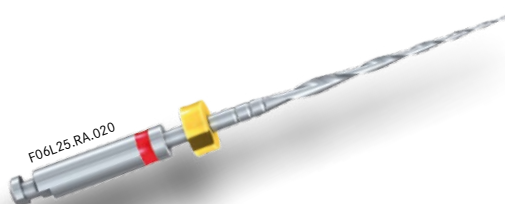

- Double-S file design provides greater debris removal
- Extremely practical as only 2 files are required
- No need to adjust torque or RPM when changing the files

## SkyTaper

The SkyTaper is a single file NiTi treatment system with a .06 taper which allows it to be used on the majority of root canals.

### Advantages:

- Complete rotary preparation with one taper .06 file
- File design is built for flexibility and efficiency
- Comprehensive range of files can suit all root anatomies

## EndoGuard

The EndoGuard creates the perfect access cavity with optimum efficiency and control.

### Advantages:

- Accomplishes straight line access to root canal
- Safe, non-cutting tip to protect the pulp chamber floor
- Cross-cut flanges eliminates chattering
