

# Treatment success & product guide

# Case complexity

You can determine the complexity of a case by assessing conditions, goals, and treatment option.

## Conditions

The presence of these conditions doesn’t prohibit treatment with clear aligners, but you must consider how their presence affects the patient’s candidacy as a good clear aligner patient and how it may compromise end results. If your patient presents with ten of these conditions and you plan to treat all of them, that would make for a far more complex case—and more of a challenge—than if you were to select only three conditions to treat.

- Skeletal imbalance
- Span of missing teeth
- Tipped teeth
- Rotated teeth
- Crowded teeth
- Open bite
- Deep bite (Overbite)
- Mis-shapen teeth
- Irregularly shaped roots or crowns
- Blocked out teeth
- Unerupted teeth
- Rx extractions
- Crossbite
- Muscle imbalance
- Periodontal issues
- Large spaces
- Existing implants
- Existing restorations
- TMD
- Bruxism
- **Patient’s:**
  - Disabilities
  - Metabolism
  - Motivation
  - Goals/Expectations

## Goals

Discuss with your patient and determine their goals for treatment.

- Talk about the patient’s existing condition
- Find out what they would like addressed with clear aligner treatment
- Educate the patient on what will be required of them to achieve their desired results
- Discuss any health benefits

## Product options

ClearCorrect offers three styles of treatment:  
Flex, ONE, and Unlimited

### FLEX

#### Just what the doctor ordered

Flex charges for each aligner, retainer, or treatment setup. Start treatment, stop treatment, resume treatment, or start a new treatment plan whenever you wish. Flex is designed to be an on-demand service; each order is shipped all at once.

### ONE

#### Plenty, for most appetites

Many clear aligner treatments can wrap up in a year or less, and we’ve got just the thing for that. Introducing ONE—our new treatment option that’s perfect for moderate cases. With ONE, you’ll get up to 24 aligners, up to one year of treatment, with one revision and one set of retainers included.

### UNLIMITED

#### Worry-free for five full years

Unlimited charges a one-time fee that includes all the treatment setups and aligners you will need to treat one patient over a period of five years, and includes two sets of retainers every six months over that five-year period. With Unlimited, you’ll receive your aligners in phases, up to 12 aligners at a time. Each phase will be delivered to sync up with the wear schedule you set with your patient.

# FLEX

Just what the doctor ordered

Get the exact amount of treatment you need—no more, no less—and only pay for what you use.

## Consider choosing flex:

- If correcting a small number of conditions
- Treatment needs relatively few aligners
- Grade 1 – 2 of the Dental Health Component of IOTN index<sup>1</sup>
- **Only simple movements required**
- Orthodontic relapse
- Minor combination treatment

### Simple movements

Slight rotation

Translational closure of small spaces

Minor intrusions

Minor Arch development or expansion

Proclination or labial crown tipping

# ONE

Perfect for average, moderate cases

One flat price will get you up to 24 sets of aligners, including one revision of up to 24 steps and one set of retainers.

## Consider choosing ONE:

- If correcting a moderate number of conditions
- When treatment requires more than 10 steps, but less than 24 steps
- Grade 2 – 3 of the Dental Health Component of IOTN index<sup>1</sup>
- When correcting severe crowding and closing large spaces
- for overbite and overjet reduction
- for crossbite corrections
- for improving tipped and rotated teeth
- for reclining excessively proclined teeth
- **Only moderate movements required**

### Moderate movements

Improving rotated teeth

Correcting severe crowding

Large space closure

Correcting crossbite

Reclining proclined teeth

Improving deepbite

Improving overjet

Improving tipped teeth

Note: These guidelines are just suggestions when deciding the complexity of a case and are not absolute. It's up to you as the treating clinician to perform the necessary patient examinations and determine if each patient is an ideal candidate for clear aligner treatment.

# UNLIMITED

## Worry-free for five full years

Pay one flat rate for as many aligners and retainers as you need for five full years, including revisions and replacements.

### Consider choosing Unlimited:

- If correcting a considerable number of conditions
- When the potential of multiple revisions is possible
- Grade 3 – 5 of the Dental Health Component of IOTN index<sup>1</sup>
- Class II and Class III bite relationships
- If correcting a skeletal condition
- If treating in multiple phases<sup>3</sup>
- Complex combination treatments requiring auxiliaries<sup>2</sup>
- **If you are a beginner or considering a case of high complexity**
- Non-compliant patients
- Patients with potential treatment interruptions
- **If difficult movements are required**

Note: These guidelines are just suggestions when deciding the complexity of a case and are not absolute. It's up to you as the treating clinician to perform the necessary patient examinations and determine if each patient is an ideal candidate for clear aligner treatment.

### Difficult movements

Significant anterior rotations

Molar rotations

Multiple extractions

Distalization or mesialization of posterior teeth

Deep curve of spee

Major extrusions

Uprighting molars

Anterior open bite corrections

Deepbite corrections

Short clinical crowns
